

(a) P_H at the center of each 2×2 block

(b) Edge-probability deviation $P_e - 1/4$

— central block — maxima, black-anchored squares — maxima, all squares

Center: $P_H = 0.101778$; max (black-anchored): $P_H = 0.123808$; max (all squares): $P_H = 0.142544$
